                        STRAIN=Isolate 50410,

Backi A.H., Dale J.W.;

Submitted (APR-1991) to the EMBL/GenBank/DDBJ databases.

-!- SIMILARITY: Belongs to the mycobacterial PPE family.

-!- CAUTION: In strain Oshkosh the gene for this protein is interrupted in position 307 by an ISG110 element.

-!- CAUTION: Was originally (Ref.3) thought to be a dihydrofolate
                                                                                                                                                                                                                                                                                                                                                                                                                                                                     64;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            91
-!- SUBCELLULAR LOCATION: Membrane-bound (Potential):
-!- INDUCTION: Induced by heat shock during exponential growth and by heterologous amylases at the transition phase of the growth cycle. Negatively regulates its own expression.
-!- MSCELLAMSOUS: Inactivation results in compensating overexpression of htth, especially during stress conditions.
-!- SIMILARITY: Belongs to peptidase family S2C.
-!- SIMILARITY: Contains I PDZ/DIR domain.
-!- GAUTION: Ref. 2 and Ref. 3 sequences differ from that shown due to frameshifts in positions 87 and 246 that produce two separate
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              :|| | :|| | : | | : | | : | | : | | : | | : | | : | | : | | : | | : | | : | | : | | : | | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | 
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                459 LSVPQAWAAANQAVTPAARALPLTSLTSAAERGPGQMLGGL-PVGQMGARAGGGLS-GVL

Bructural insights into the pro-apoptotic activity against a nonspecific substrate beta-casein. Promotes or induces cell activity adainst a nonspecific substrate beta-casein. Promotes or induces cell an object individual protease or induces cell increase in caspase activity, or by a BIRC inhibition-independent mechanism. Isoform 2 seems to be proteolytically inactive.

C. SUBUNIT: Interacts with Mxi2. The mature protein, but not the precursor, binds to BIRC2, arRC3 and BIRC4/MIAP.

C. SUBUNIT: Interacts with Mxi2. The mature protein, but not the intermembrane space. Released into the cytosol following apoptotic stimuli, such as UV treatment, and stimulation of mitochondrial with Mitochondrial precommants aspase-8 truncated BID/tBID.

C. HATERNATIVE PRODUCTS:

Brant_Alternative splicing, Named isoforms-4;
